

ABSTRACT

An apparatus may be used to dispense a plurality of automotive appearance care products. The apparatus may include a plurality of storage containers. Mixing systems may be coupled to the storage containers. The mixing systems may combine raw materials with a carrier fluid to produce product fluids. The product fluids may be stored in storage vessels. A plurality of pumps may be used to produce a flow of one or more product fluids. The product fluids may be dispensed through one or more dispensing conduits. Product fluids may include, but are not limited to, polishes, waxes, lubricants, water-based dressings, soaps, degreasers and wheel cleaners.
